
Damilola Dahunsi, CBAP, CSM, CSPO

Senior Technical Business Analyst | Implementation, Business Systems & Enterprise Change

Ottawa, ON | 236-660-6272 | dahunsi.damilola@outlook.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

CBAP-certified Senior Technical Business Analyst with 10+ years of experience delivering enterprise transformation initiatives across payments, SaaS, digital commerce, insurance, and regulated environments. Proven ability to translate complex business and operational needs into scalable solution requirements, BPMN workflows, API/interface specifications, data mappings, UAT assets, and implementation-ready documentation while bridging business and technology teams. Known for reducing reconciliation and workflow exceptions by 25%, improving onboarding timelines by about 40%, and supporting up to 95% first-pass acceptance across 200+ validation scenarios.

CORE COMPETENCIES

Requirements and Analysis: Stakeholder interviews, workshops, JAD sessions, BRDs, FSDs, user stories, acceptance criteria, current-state and future-state analysis, gap analysis, impact analysis, process mapping, BPMN, traceability, and implementation-ready recommendations.

Technical BA and Business Systems: Functional and non-functional requirements, source-to-target thinking, business rules, workflow orchestration, finance-adjacent operations, customer-support processes, onboarding, reporting, and practical business-to-IT translation.

Data, Integration and Testing: SQL validation, Excel and Power BI analysis, source-to-target mapping, API and file-based interface support, Postman, UAT, SIT, regression, defect triage, release-readiness validation, and early-life support.

Delivery and Collaboration: Backlog refinement, roadmap support, vendor coordination, knowledge transfer, SOPs, user guides, training materials, implementation planning, adoption support, post-go-live stabilization, and collaboration across business, operations, QA, engineering, finance, and leadership teams.

PROFESSIONAL EXPERIENCE

Product Expert | Intuit TurboTax Canada Through Working Solutions | Remote

Jan – April 2026

- Analyzed 25+ client cases and translated tax-law and compliance changes into business rules, process updates, validation assets, and user guidance in a customer-facing SaaS environment.
- Produced acceptance criteria, process documentation, validation assets, and knowledge materials that supported adoption of updated tax and compliance workflows while contributing to about 99.5% defect-free releases.
- Facilitated issue investigation and feedback synthesis across support and delivery teams, strengthening policy and validation controls and helping reduce security vulnerabilities by about 60%.

Specific workflows handled:

- Policy-to-process translation, user guidance, validation support, issue analysis, and release-readiness support in a regulated SaaS context.
- Customer-facing support escalations, documentation quality, and structured knowledge transfer for frequent change.

Technical Business Systems Analyst | RS2 Plc | USA & Malta

Nov 2021 - Feb 2024

- Translated business, operational, and client requirements into BRDs, FSDs, user stories, acceptance criteria, process flows, data mappings, and implementation-ready artifacts for a global payments platform processing about 1B+ transactions monthly.
- Documented and analyzed onboarding, authorization, clearing, settlement, reconciliation, dispute, merchant-funding, and reporting workflows across acquiring and issuing environments.
- Led workshops and solution reviews with engineering, QA, operations, finance, compliance, and client teams while coordinating 200+ UAT and validation scenarios across 15+ institutions, contributing to about 95% first-pass acceptance.

- Performed SQL-driven validation, reconciliation analysis, and source-to-target checks across transaction, charge, and client data, helping reduce exceptions by about 25% and improve reporting accuracy.
- Supported onboarding and change delivery for clients including WorldPay, Paysafe, Bank of America, Wells Fargo, Landsbankinn, and Barclays while improving release readiness, implementation confidence, and cutting post-release defects by about 30%.

Specific workflows handled:

- Onboarding, authorization, clearing, settlement, reconciliation, merchant funding, dispute resolution, statement generation, and operational reporting.
- User stories, field mappings, API and file-based validation, source-to-target checks, operational controls, and post-launch stabilization.
- Merchant accounting, fee-qualification analysis, funding models, chargeback-related change, and downstream reporting issue investigation.
- Collaborated with product managers to define credit card pricing, fee structures, and interest-rate strategies; managed end-to-end business analysis for credit card product enhancements including mobile payments, contactless technology, and virtual card solutions; delivered payment requirements across retail and commercial initiatives supporting embedded-finance and digital-transformation goals.
- Authored BRDs, FRDs, FSDs, user stories, API and interface requirements, and traceability artifacts for lending, payments, and core-banking initiatives.
- Validated API responses and payloads; supported SIT, UAT, and release readiness for digital payment changes; and analyzed digital payment data using SQL, Power BI, and Tableau to identify drop-offs and failure trends that informed user-experience and success-rate improvements.

Product Lead / Technical Architect | Baqers.com / Baqers.ca | Remote, Canada

Sept 2023 - Nov 2025

- Translated an early-stage commerce concept into roadmap priorities, backlog items, business requirements, and implementation-ready operating workflows spanning ordering, onboarding, fulfillment, customer support, reporting, and post-purchase service.
- Defined business needs, process flows, and functional expectations for catalog management, customer ordering, merchant onboarding, inventory coordination, delivery support, and service-recovery handoffs across engineering and operations teams.
- Built KPI and operational reporting across sales, fulfillment, and customer experience, helping reduce fulfillment cycle time by about 20% and improve leadership decision-making.
- Led VOC, support, and usability feedback loops, then converted findings into prioritized workflow improvements, production fixes, and clearer operating procedures that reduced unresolved complaints by about 25%.
- Improved release discipline and platform stability through issue triage, process redesign, implementation follow-through, and cross-functional execution, contributing to about 99.5% uptime in a customer-facing environment.
- Supported retail and omnichannel delivery initiatives spanning BOPIS, ship-from-store, order brokering, POS, and ecommerce integrations across Oracle Xstore, ORMS / OROB, SFCC, Shopify, ERP, and 3PL-connected workflows.

Specific workflows handled:

- Order intake, checkout-adjacent experiences, merchant and vendor onboarding, fulfillment coordination, and customer support escalations.
- Pricing visibility, logistics handoffs, KPI reporting, issue triage routines, service recovery, and operational reporting for leadership.
- Validated CyberSource payment authorization, Decision Manager fraud rules, Avalara / TIFR tax integrations, and REST API flows for authorization, capture, refund, and void scenarios using Postman-backed testing and end-to-end business validation.
- Led and supported release readiness, user-story refinement, production validation, and cross-team coordination for payment and transaction platforms processing high volumes across card, merchant, and banking environments.

Business Analyst / Implementation Lead | Asseco Software | Nigeria & Europe

Jun 2016 - Oct 2021

- Led requirements gathering, stakeholder workshops, gap analysis, and implementation support across 15+ initiatives covering banking, insurance, fiscalization, healthcare, government, and broader enterprise systems.
- Produced BRDs, functional specifications, process maps, BPMN workflows, user guides, training assets, and implementation documentation that improved adoption and delivery clarity.
- Mapped current-state and future-state workflows, coordinated vendors and stakeholders, and translated operational and policy needs into rollout decisions, process improvements, and business-ready solution artifacts.
- Directed UAT, validation, and release coordination across regulated multi-country environments, achieving about 98% defect detection before release and improving workflow efficiency by about 30%.
- Drove large migration and rollout programs, including 2.2M+ customer and staff credentials migrated with less than 3% error and about 40% faster onboarding timelines while contributing to over \$300K in implementation value.

Specific workflows handled:

- Core banking, authentication, digital-channel, reporting, reconciliation, insurance, fiscalization, and public-service workflows.
- SOP creation, training materials, rollout planning, business-rule clarification, stakeholder walkthroughs, and post-go-live support.
- Process redesign, implementation governance, cross-functional coordination, and user-facing operating guidance in compliance-sensitive environments.

Technical Support Analyst - Enterprise Systems | Asseco Software | Nigeria Jun 2016 - Oct 2017

- Resolved production issues across integrated business systems through SQL, log analysis, root-cause investigation, and structured coordination with engineering and operations teams.
- Supported SWIFT, ISO 20022, ERP, treasury, and authentication-related integrations while improving service-restoration timelines by about 25% and reducing recurring incidents by about 30%.
- Produced issue analysis and support documentation that improved stakeholder communication, operational clarity, and post-deployment follow-through.

Software Quality Assurance Analyst | Parkway Projects Ltd. | Nigeria Nov 2014 - Jun 2016

- Executed functional, integration, regression, and UAT testing for banking, retail, and enterprise applications, improving release quality and reducing production defects by up to 40%.
- Developed test cases, traceability artifacts, and validation scenarios aligned with business requirements, strengthening release confidence and deployment readiness.
- Built the QA, issue-analysis, and business-rule validation foundation that later underpinned senior BA and implementation work.

EDUCATION

- Post-Degree Diploma in Business Administration | Langara College, Vancouver, BC | 2025 | CGPA: 3.69
- BSc (Hons) in Computer Science | Ekiti State University, Nigeria | 2013 | CGPA: 3.55

CERTIFICATIONS

- CBAP - Certified Business Analysis Professional
- CSM - Certified Scrum Master
- CSPO - Certified Scrum Product Owner
- ITIL V4 - Foundation Certificate in Service Management
- ISTQB - Certified Software Tester

TOOLS AND PLATFORMS

SQL, Excel, Power BI, Jira, Confluence, Postman, Zephyr Scale, Jenkins, Visio, SharePoint, MS Project, BPMN, REST APIs, SOAP/WSDL, source-to-target validation, hybrid Agile / Waterfall delivery, and cross-functional documentation workflows.
